ALLEGHENY FOREST EXPERIMENT STATION*

LIBRARY

Technical Note No. 8.

MAR 8 1968

ROCKY MOUNTAIN STATION

FOREST AREA ANNUALLY CUT OVER

From available data on the quantity of forest products harvested in its territory during the pre-depression years 1925 to 1929, both inclusive, and from estimated stands per acre of the materials cut, the Station has computed the probable acreages of forest land cut over annually under what may reasonably be regarded as normal conditions:

Product	Delaware Acres	Maryland Acres	New Jersey Acres	Pennsylvania Acres
Lumber	2,970	17,880	4,950	62,000
Pulpwood	60	8,000	0	3,800
Fuelwood	3,645	20,500	41,900	67,730
Fence posts	51	390	650	7,650
Mine props	340	5,040	1,250	106,620
Poles	77	527	93	290
Piles	1,467	2,465	440	220
Hewed ties	100	387	33	3,067
Distillation wood	<u>0</u>	<u>0</u>	<u>0</u>	<u>1,500</u>
All products	8,710	55,189	49,316	252,877

The total area for the Station territory is 366,092 acres, or about 1.8 percent of the total area of forest land, regardless of productivity.

October 1, 1935.

R. D. Forbes,
Director.
